To Whom It May Concern,

I am writing to provide a reference for Mr. Hassan Al Subaidi, who served as an Intern at the Heine Center for Artificial Intelligence and Data Science (HeiCAD) at Heinrich Heine University from January 2026 to March 2026. Mr. Al Subaidi was exceptionally qualified when he joined our team. In particular he had excellent technical skills in the area of agentic AI. We could therefore assign tasks to him that are far beyond the reach of regular interns. During his internship, Mr. Al Subaidi was therefore tasked with evaluating retrieval-augmented generation (RAG)-based agentic AI systems to support teaching in university courses.

Mr. Al Subaidi quickly grasped the nuances of the RAG-based AI systems under evaluation and conducted comprehensive assessments of their functionality, scalability, and applicability within an academic environment. His work included benchmarking existing systems, coordinating the interface between EdTech startups and academic research, providing methodological guidance on prompt design and training students in the effective use of AI tutoring tools.

One of Mr. Al Subaidi's notable contributions was his recommendation of a particular RAG-based agentic AI system that effectively addressed our requirements for supporting university courses. His recommendation, supported by empirical testing and user feedback, convinced us to adopt the system he identified. This system has since been successfully deployed at Heinrich-Heine University, streamlining teaching support and enhancing the learning experience for both instructors and students.

Throughout his internship, Mr. Al Subaidi exhibited excellent problem-solving skills, a collaborative work ethic, and a keen interest in artificial intelligence research. He worked closely with our faculty and staff, demonstrating strong communication skills and the ability to bridge the gap between technical experts and non-technical stakeholders.

Heinrich Heine
Universität
Düsseldorf

Based on his performance, I am confident that Mr. Hassan Al Subaidi will be an asset to any organization seeking expertise in artificial intelligence and data science. He combines strong technical skills with a proactive attitude and an ability to deliver results in a complex and evolving field. I am pleased to recommend him without reservation and would be happy to provide additional information if required.

Sincerely,

Martin Mauve

Director of HeiCAD
